

To hire a Spiegeltent from Spiegel tents.org

Spiegel tent .org are well proven structures that are simple to erect and dismantle. However there are some basic requirements that hirer should be aware of before proceeding with an enquiry.

Spiegel tent .org will be happy to undertake a site visit and will advise the client on all aspects of installation and give advice on capacity, seating arrangements staging and maintenance of the structure.

Spiegel tents can be erected in two days and dismantle in one. The construction teams are friendly, experienced and efficient. Spiegel tents are free standing structures and can be erected on tarmac, concrete, lawns and any firm surface. They cannot be erected on soft earth or wet ground.

There should be sufficient space to allow for the footprint for the structure and, adequate external access for fire safety requirements. In normal circumstances a clear open space of no less than 24m will be needed.

The ground on which they are erected needs to be flat, however a slight incline - a slope of 40cm over 30m - can be accommodated. Erecting a spiegel tent is labour intensive. It is delivered in an articulated truck. The truck needs to unload within 2 metres of the erection site. If truck access is not possible further labour charges will be incurred.

The truck measures 16m in length, 2.55m in width and weighs 28 tons.

Spiegel tents are supplied with internal lighting. The client must supply a power supply of a minimum of 32 amps.

Most spiegel tents are supplied with a bar for serving drinks. These bars do not have sinks, water supplies or coolers. The client must supply these items.
